

## MARKET REVIEW

The Bloomberg Barclays 1-3 Year Government/Credit Index return of 0.34% for the third quarter was almost entirely due to interest income as U.S. Treasury yields were nearly unchanged. The largest change in yield occurred at the two-year maturity where yields increased 10 basis points, while three year yields increased 8 basis points, and the five-year only 5 basis points. The 1-3 year Treasury index returned 0.2% for the quarter, while the 1-3 year Corporate index outperformed with a gain of 0.5%, as did 0-3 year Mortgage-Backed securities with a return of 0.8%. Spreads for 1-3 year corporate bonds tightened to +57 basis points at quarter-end, matching the low of June 2014, but otherwise the tightest since July 2007. Among investment-grade corporates, the best performing industries included Basic Industry, Energy, REIT's, Utilities, and Banks. Industry laggards included Capital Goods, Communications, Transportation, Consumer Non-Cyclical, and Consumer Cyclical. Lower quality bonds outperformed as the Bloomberg Barclays High Yield index returned 2% for the quarter and 7% year-to-date.

## PORTFOLIO REVIEW

During the quarter, we maintained our defensive posture. Our positioning reflects the interplay between current valuations and our expectations for the economy. Today our concerns are based on the combination of higher valuations on spread product. Corporate bond spreads are at the tightest level since 2007 and we are concerned about risks regarding the macroeconomic environment and the geopolitical situation as the uncertainty regarding Trump policies continues to unfold in 2017.

In terms of the economy, we are in the eighth year of an economic expansion that began as we exited one of the most severe recessions since the 1930s. Yet despite an extraordinary amount of fiscal and monetary stimulus, the U.S. economy has averaged a modest real growth rate of about 2% since the beginning of 2010. While the job market has largely recovered and continues to maintain a moderate level of growth consistent with maintaining today's low unemployment rate, wage growth remains stubbornly depressed. Additionally, inflation remains low, generally below the Federal Reserve's target level, and productivity has been expanding at its slowest rate in the post-World War II era.

With this as a backdrop, the Federal Reserve is reducing accommodation through a combination of a higher Fed Funds rate, three increases over the past eight months, and a plan to reduce the level of quantitative easing through the reduction of reinvestment of principal and interest payments. Yet even before the impact of higher rates gains traction, certain segments of the economy have suggested concerns

Today, investment grade corporate bond valuations as measured by the BAML corporate bond index are near the lowest level since June 2007 and likewise volatility as measured by the Chicago Board Options SPX Volatility Index remains near its lowest point since the peak in 2007. In our opinion, the market is pricing in expectations for stable-to-increasing growth and a benign geopolitical situation. In contrast, as we described above, we believe that we may be headed for lower growth and increasing volatility.

We are suspect of the seemingly high degree of euphoria-reflected in market prices and increased expectations for higher economic growth resulting from a variety of policy initiatives under the new administration. Especially concerning is we do not see clear and consistent policy proposals across both the legislative branch and executive branch of government. We also are concerned about the administration's approach to trade and foreign policy which may alienate the U.S. while also risking our legacy of global leadership. As example, our engagements with Europe and NATO have unnecessarily raised tensions with our strongest allies, the saber rattling on NAFTA risks disrupting trade with two of our largest trading partners and the grave risk of North Korea continues to grow.

Given the low level of compensation offered by higher beta securities and our concern about underlying economic fundamentals, we continue to focus on ways to reduce our exposure to lower rated and historically more volatile corporate bonds.

## PRODUCT OVERVIEW

The Short Term Fixed Income strategy seeks to benefit from opportunities arising from changes in interest rates, volatility, credit and sector spreads and the shape of the yield curve in constructing a portfolio that seeks to outperform the Barclays U.S. 1-3 Yr Govt/Credit Index over time. Our process is based on the belief that fixed income markets are inefficient and that active management which emphasizes sector and security selection can generate superior long-term results.

Information presented for Top Contributors and Detractors is based on a representative account within the Short Term Fixed Income Composite, and on a trade date basis. As of September 30, 2017, the Short Term Fixed Income composite consists of equal to or less than five accounts, and the composite represents 2.22% of the total firm assets. The minimum portfolio size for inclusion in the composite is \$10 million. The benchmark for this composite is the Barclays Capital U.S. 1-3 Yr Government/Credit Index. The benchmark is used for comparative purposes only and is provided to represent the market conditions during the period shown. The Barclays Capital U.S. 1-3 year Government/Credit Index measures corporate and non-corporate fixed income securities that are rated investment grade and have 1-3 years to final maturity. It is formerly known as the Lehman Brothers 1-3 year Government/Credit Index. Benchmark returns do not reflect the deduction of advisory fees, custody fees, transaction costs, or other investment expenses. The benchmark returns assume the reinvestment of dividends and other earnings. An investor cannot invest directly in an unmanaged index.

Specific securities identified and described do not represent all of the securities purchased, sold or recommended for advisory clients, and you should not assume that investments in the securities identified and discussed were or will be profitable.
